### DETAILED ACTION

1. Claims 1-14 are allowed. The following is an examiner's statement of reasons for allowance:

With respect to claims 1-7, the art of record was not found to disclose or suggest the recited combination, including the feature of generating a respective first residue signal representing quantization error relative to a first quantization level and a respective second residue signal representing quantization error relative to a second quantization level.

With respect to claims 8-11, the art of record was not found to disclose or suggest the recited combination, including switches that are arranged to transfer charge from the first received residue signal to the first output capacitor with a gain factor of approximately 2 and charge from both the first and second received residue signals to said second output capacitor each with a gain factor of approximately 1 in a first sub-range mode and to transfer charge from the second received residue signal to the second output capacitor with a gain factor of approximately 2 and charge from both the first and second received residue signals to the first output capacitor each with a gain factor of approximately 1 in a second sub-range mode.

With respect to claims 9-14, the art of record was not found to disclose or suggest the recited combination, including the features of: transferring the charge of input capacitors to first and second output capacitors during a tracking phase; and generating first and second residue signals representing the quantization error left after the A/D conversion of the stage from the first and second output capacitors respectively.

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
